

Trading Bot Algo

What to achieve ?

- Able to determine the overall trend (Order Flow)
- Smart enough to determine when the trend shift
- Targeting 1:2 RR
- Market Structure (Important)

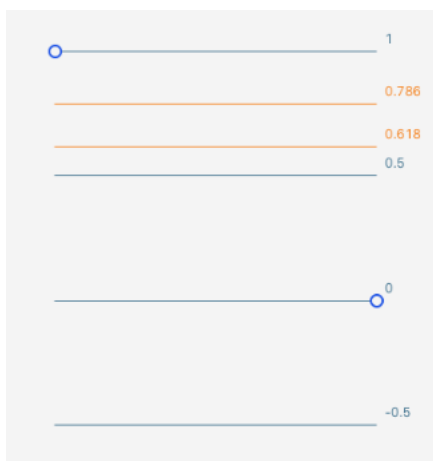

Criteria

1. Determine the overall trend (2-3 days trend) until the trend end
2. Timeframe purely 15m for trend analysis , and 5m for entry confirmation
3. Look for 15m swing points (Highs and Lows)
4. Bot must be able to detect a valid retracement
5. Intraday trade , no holding overnight

Liquidity Points (Sessions and Swing Liquidity)

1. Asian High and Lows (8am -12pm)
2. London High and Lows (2pm - 5pm)
3. New York will be next day liquidity (8pm - 12am) - Previous Day High / Lows
4. Bot must be able to adjust the timing depending on the Daylight Savings

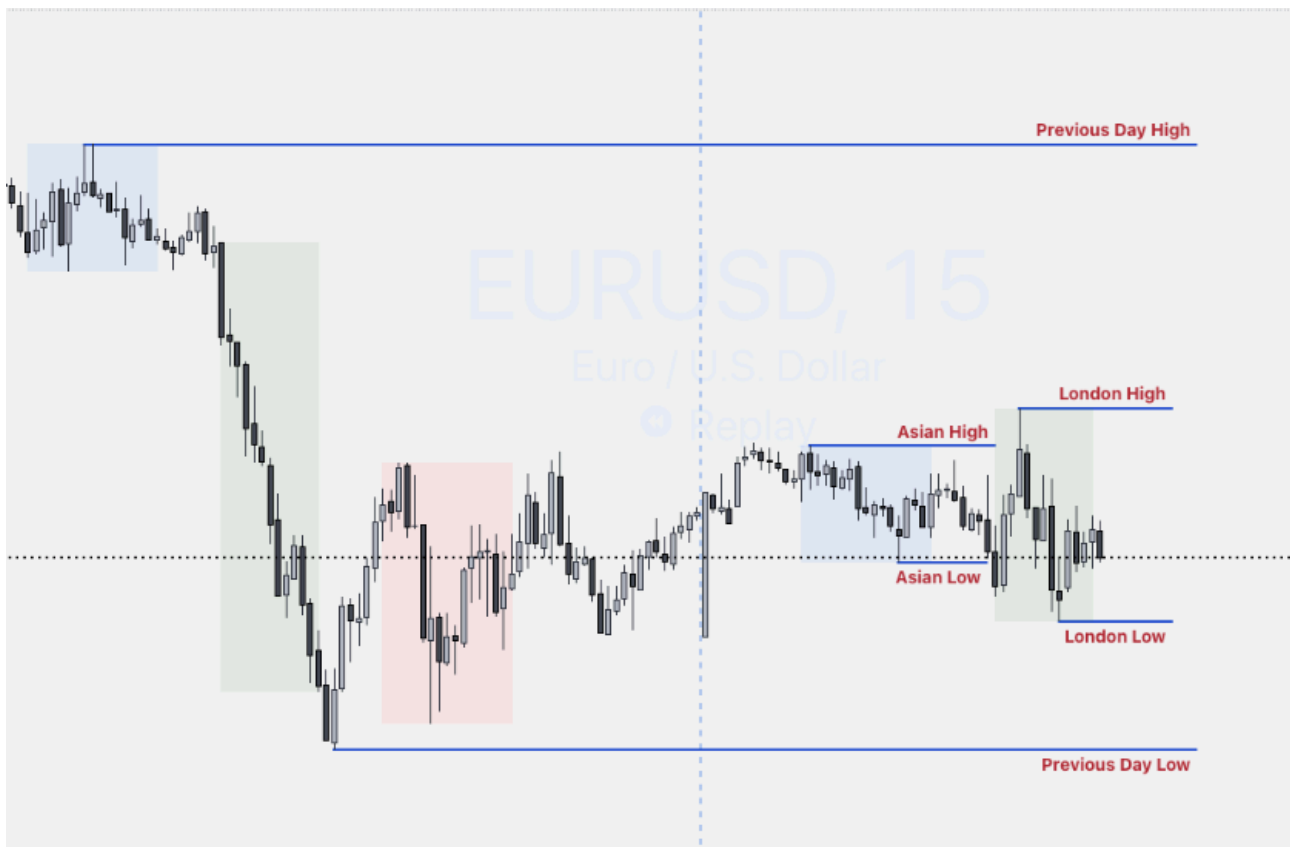

Tools (Fibonacci Retracement)

Session Liquidity + Previous Day High & Lows

Price most likely will have a big reaction once the liquidity has been taken out , therefore we will look for an opportunity to risk. But of course it has to be **align with the overall trend**

Swing Points (High and Lows)

The one mark with red is the real swing points , whatever in between is just noise to confuse people. how is the swing low valid is because it broke the blue line.

Real Chart Example (Bullish OrderFlow)

Use Case of Fibonacci Retracement (Without entry confirmation v1 - Risky)

1. Start from point A to Point B
2. We will be only interest in taking trade within the gold line , 0.618 and 0.786
3. This is 1:2 risk to reward ration

Use case of Session Liquidity + Fibonacci Retracement + Confirmation(5m) - (Conservative Trading)

Example of Asian Highs and Lows
